

**Tender: EAHC/2013/Health/04. Empowering patients in the management of chronic diseases**

The EMPATHiE Consortium: Empowering Patients in their Health in Europe

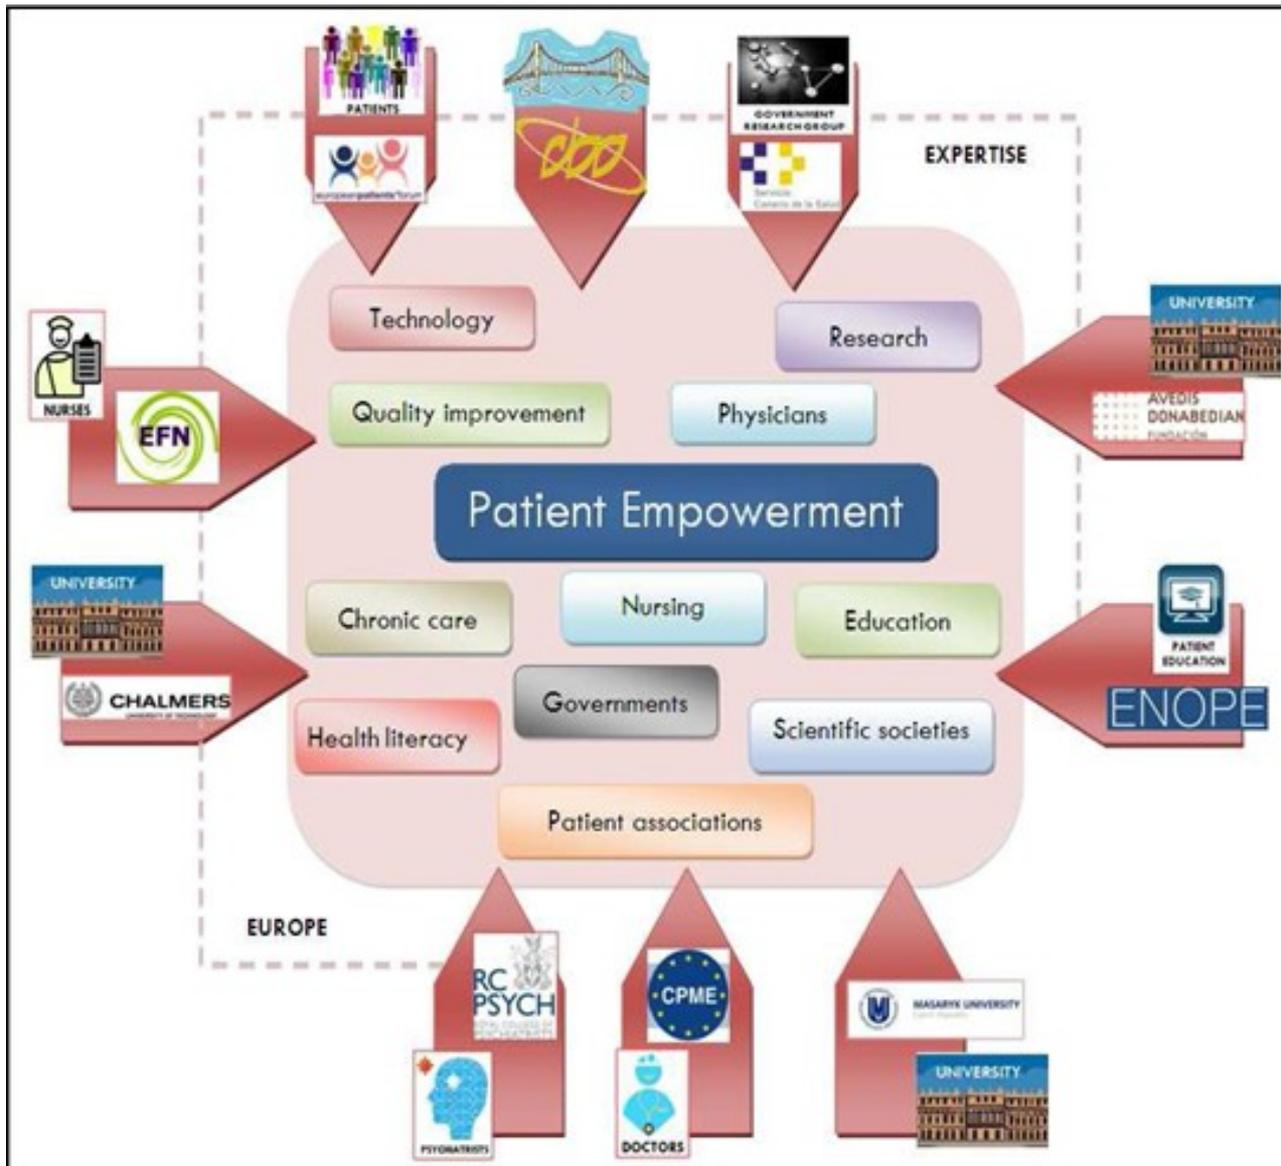

# Background

Patient empowerment (PE) has proved to be a difficult area in the quality agenda for authorities to progress, as has been previously discussed in this WG.

Early this year, EHFF took the opportunity to convene a Consortium of interested parties (currently 19 European stakeholders including patient organisations, other NGOs, Institutes and University departments) to make a successful offer to participate in the EIP-AHA to provide expertise on PE for the action group on integrated care, B3.

Recently the Consortium has been awarded the tender to be described, with a kick-off date of November 18th. We see this as a first phase of one policy direction aimed at meeting the challenge of financial strictures as well as promoting an element of the 'new paradigm'.

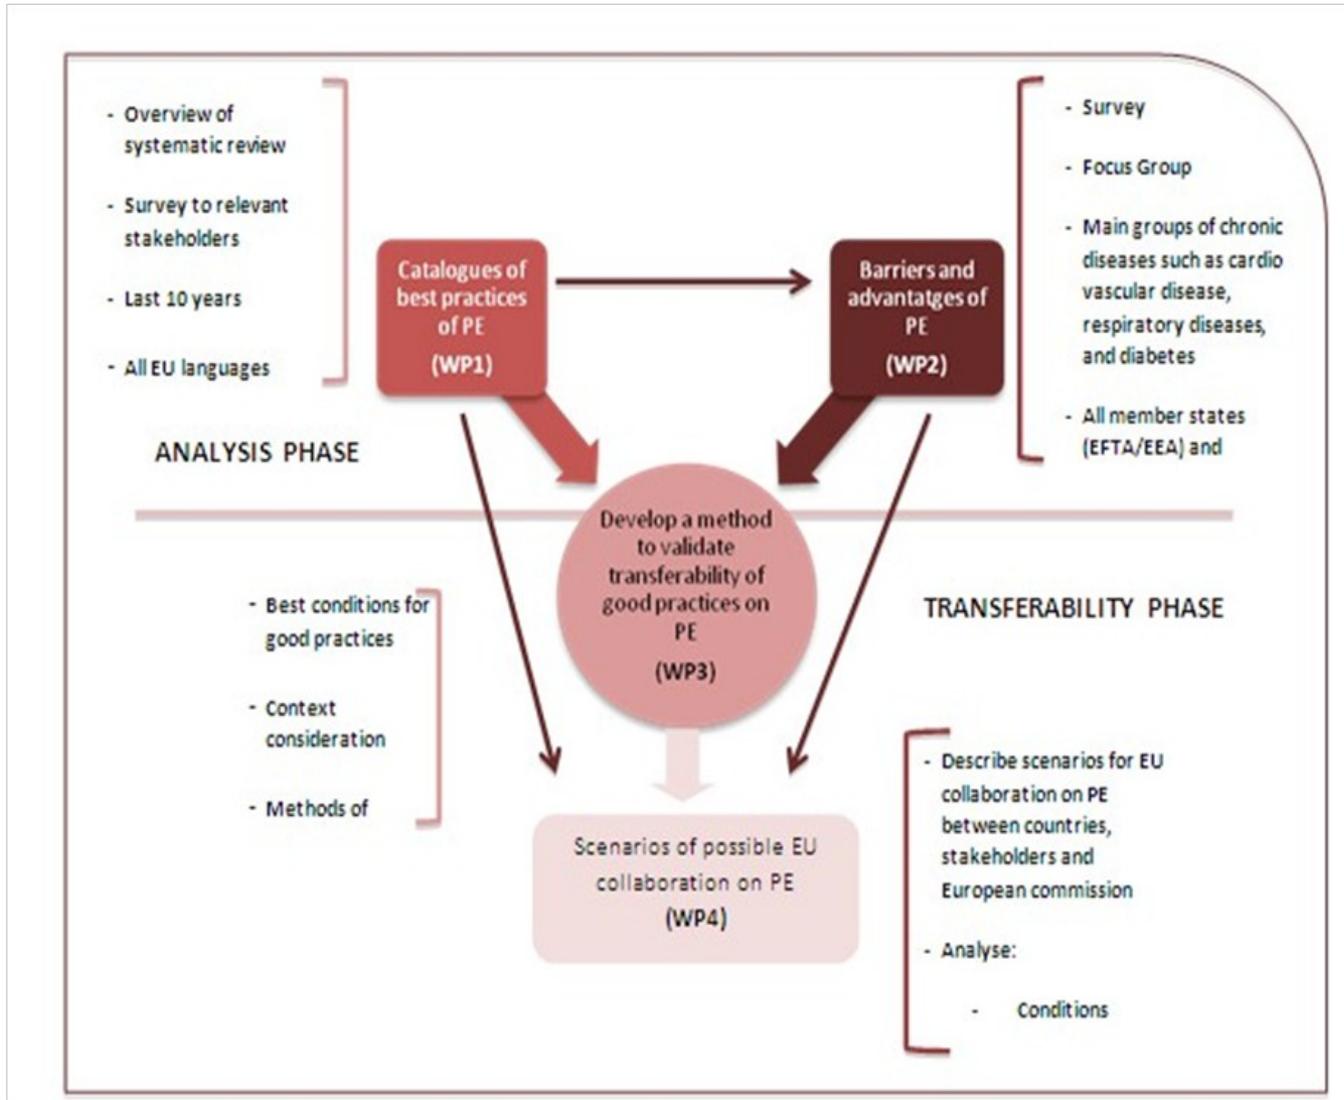

# Who we are

# Components of the tender

- WP1. To identify models of best practices for patient empowerment
- WP2. To perform an analysis of the models of patient empowerment and present a clear identification of advantages and barriers to empowering patients
- WP3. To develop a method to validate transferability of good practices, taken into account the context of other diseases, patient characteristics and specificities of health systems
- WP4. To develop scenarios of EU future collaboration on this subject

# Relation of the work packages

Thank you for your attention!

We hope to report on the first phase of the project before the summer holiday 2014.

Progress can be followed in the EMPATiE section of the EHFF website: [www.ehff.eu](http://www.ehff.eu)

Rosa Sunol (project leader) and David Somekh
